

INNOVATION ZOYSIAGRASS

PARADELLO
Professionisti del prato naturale

THE PRODUCT

Innovation Zoysiagrass revolutionizes the traditional concept of zoysia as known in the market so far. Innovation has exceptional characteristics in multiple aspects that make it a high-quality turf: early spring green-up, color retention in the fall, attractive aesthetic appearance during the summer and winter seasons, cold resistance in transition zones, resistance to turf diseases, and competition against weeds. Innovation Zoysiagrass is a new patented and registered hybrid (sterile) zoysia developed over 13 years of research by researchers from Kansas State University and Texas A&M University.

WHY CHOOSE THE PRODUCT

WATER CONSERVATION

40% less water consumption. Good resistance to water stress.

REDUCED MAINTAINANCE COSTS

Less frequent mowing, lower nutritional requirements.

ECOLOGICALLY SUSTAINABLE MANAGEMENT

Highly competitive against weeds, resistant to lawn diseases and immune to common hostile insects.

FEATURES

Typology

Pre-grown turf rolls on silica sand, available in standard sod or big rolls. 100% composition of Innovation Zoysiagrass.

Description

As a Zoysiagrass is versatile and cold-resistant. It is also suitable for the climate of northern Italy and excels in transitional zones. Aesthetically, it has a striking appearance with a vibrant deep green colour and a medium-fine leaf texture. Ideal for golf courses, sports fields, landscapes and residential gardens.

Foot traffic resistance and growth

Highly vigorous, with significantly faster growth compared to other Zoysia. It displays exceptional resistance and resilience.

Shade tolerance

Great shade tolerance compared to other warm season grasses.

Seasonal behaviour

Proven cold resistance down to -10°C.

Outstanding autumn colour retention, turning yellow gold in winter.

Spring Green Up: excellent.

Thrives in warmer temperatures, delivering optimal performance, especially during the summer.

Mowing

Every 7 days during the summer season.

Irrigation

High drought tolerance. Good resistance to water stress.

Maintenance

Highly competitive against weeds, resistant to common turf pathogens, low nutrient requirements, reduced pesticide usage. Possibility of pigmentation to give it a green appearance even in winter time.
